[Partnerships](#) [1]

Sciensano is always open to new collaborations within the framework of its mission. We focus on targeted partnerships to address and answer health issues which are critical for humans, animals and the environment. The optimal use of our resources and expertise, combined with those effective collaborations, allows us to foster the innovation required to achieve our goals. Collaborations may take various forms. Sciensano favours ideas and proposals that:

- will contribute to the success of Sciensano's mission;
- will bring in added value in terms of expertise and/or resources.

Enhancing Science through Collaborations with Sciensano

Sciensano has forged a variety of collaborative partnerships with governmental agencies, national and international academic institutions, health professionals, scientists and partners from the private sector, with the aim of achieving its ultimate goal: **connecting health, science and society** and keeping humans and animals healthy through scientific and technological breakthroughs.

Partners

We respect [Sciensano's core values](#) [2] in all our partnerships. These values are reflected in our legal contracts, our internal procedures and our official integrity committee.
