

SYMPOSIUM "HEALTH CHALLENGES OF THE 21ST CENTURY"

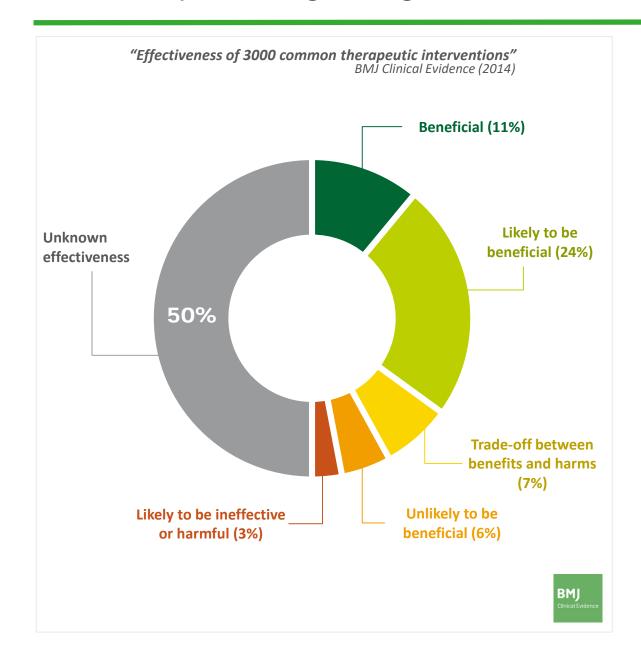

The collection and management of "real world data" for public health policy: past, present and future of the healthdata.be platform

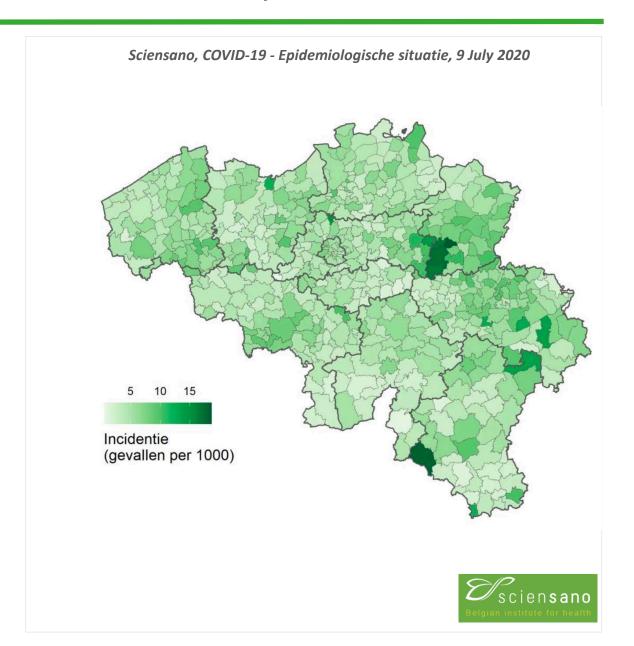

Real world data science in Belgian Public Health

... we have come a long way, a lot has been done, but a lot more still needs to be done ...

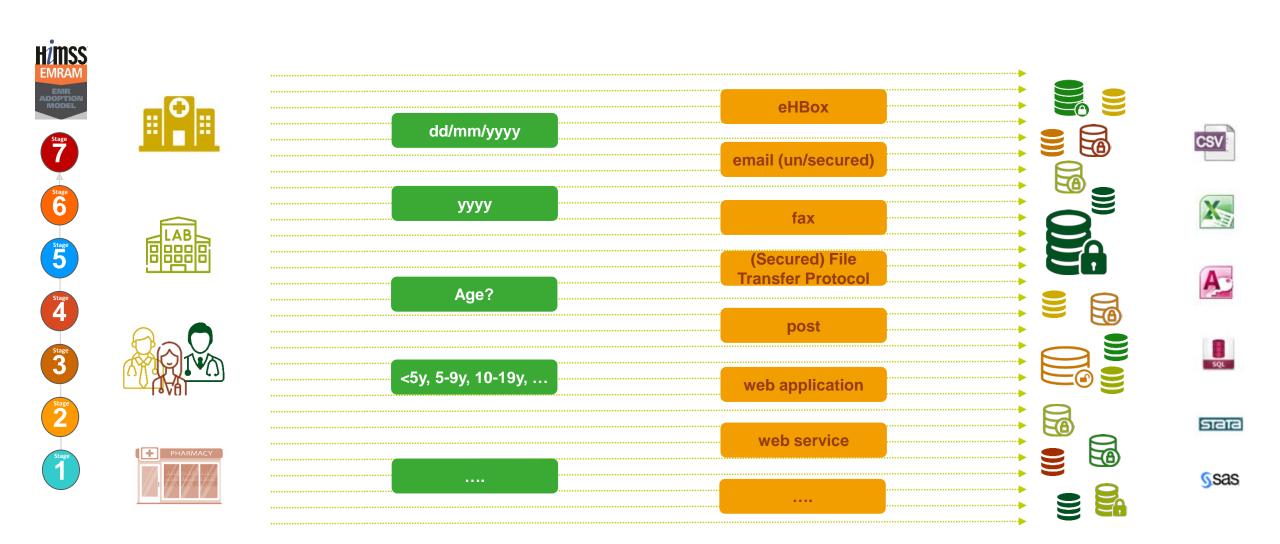

2015 2023

Clinical & epidemiological registries and surveillances are necessary!

But high diversity in data collection and management practices exist

Roadmap towards a national health research infrastructure

2006 2010 2013 2014 2015

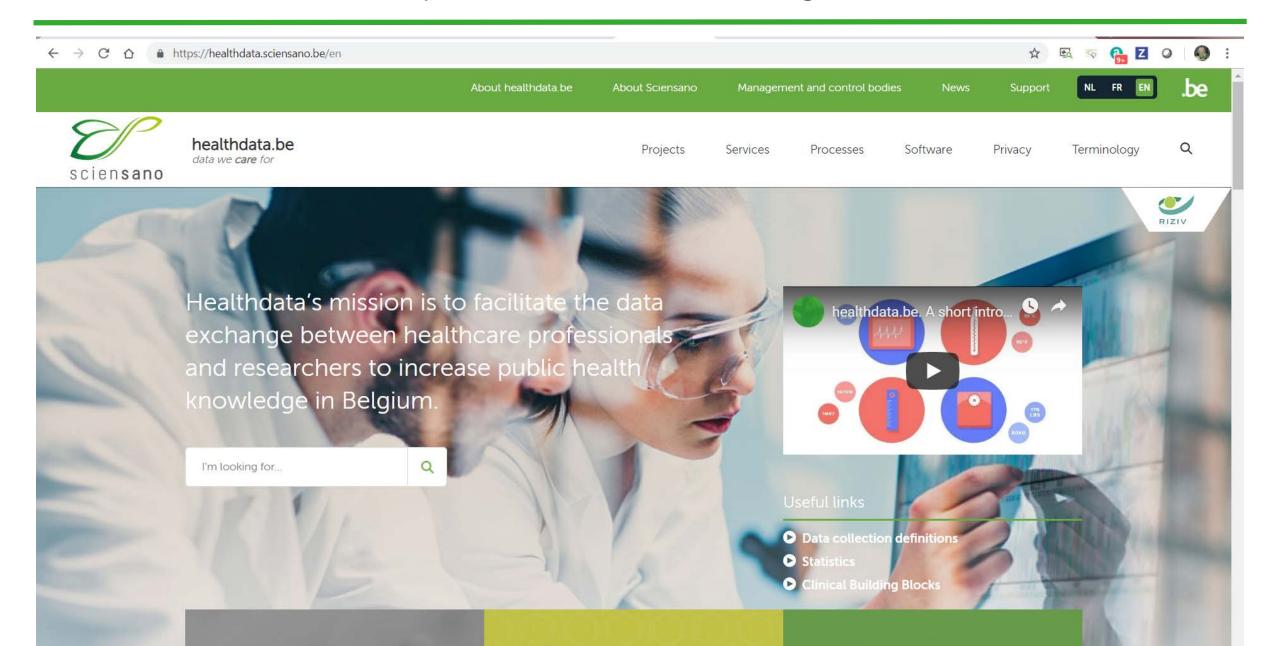

2015: healthdata.be - service provider in collection & management of health related data

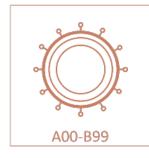

Real world data science in Belgian Public Health

... we have come a long way, a lot has been done, but a lot more still needs to be done ...

2015

2022: projects supported by healthdata.be cover full bio-medical spectrum

106
Projects in production

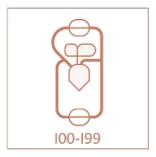

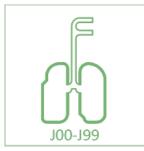

55
Projects in progress

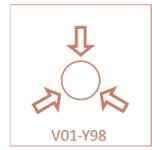

2022: very diverse users group of healthdata.be services

2018 2019 2020 2021

2020: SARS-CoV-2 as challenge for data collection & management system

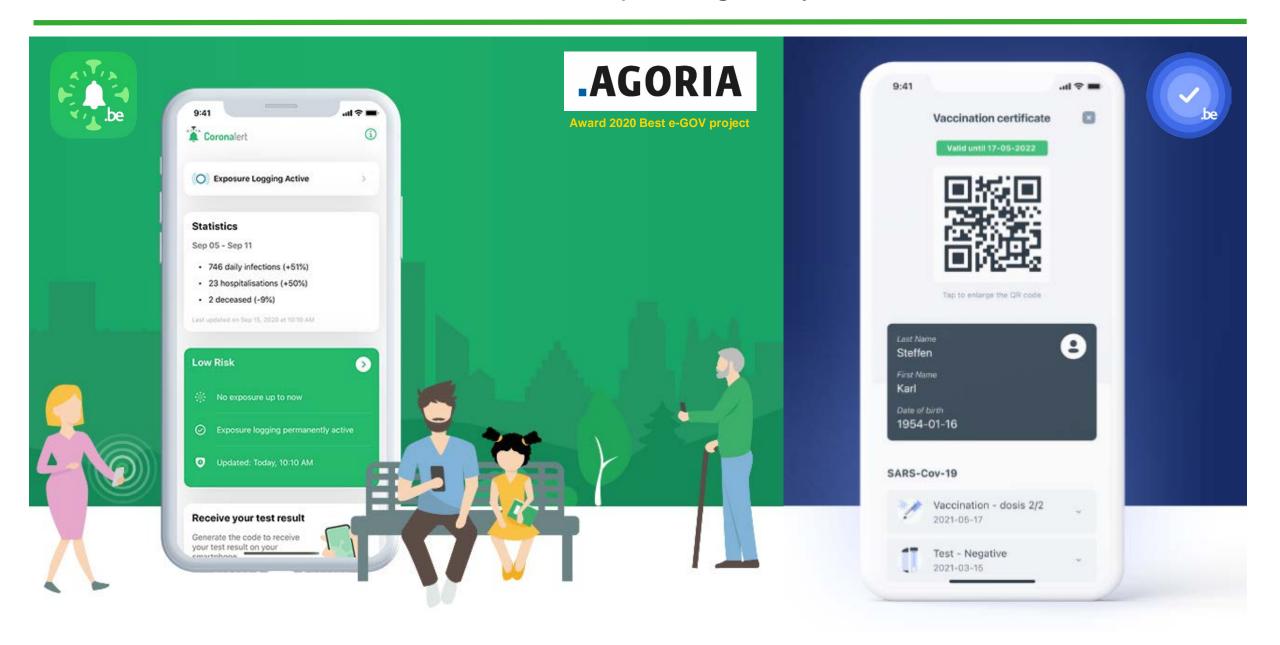

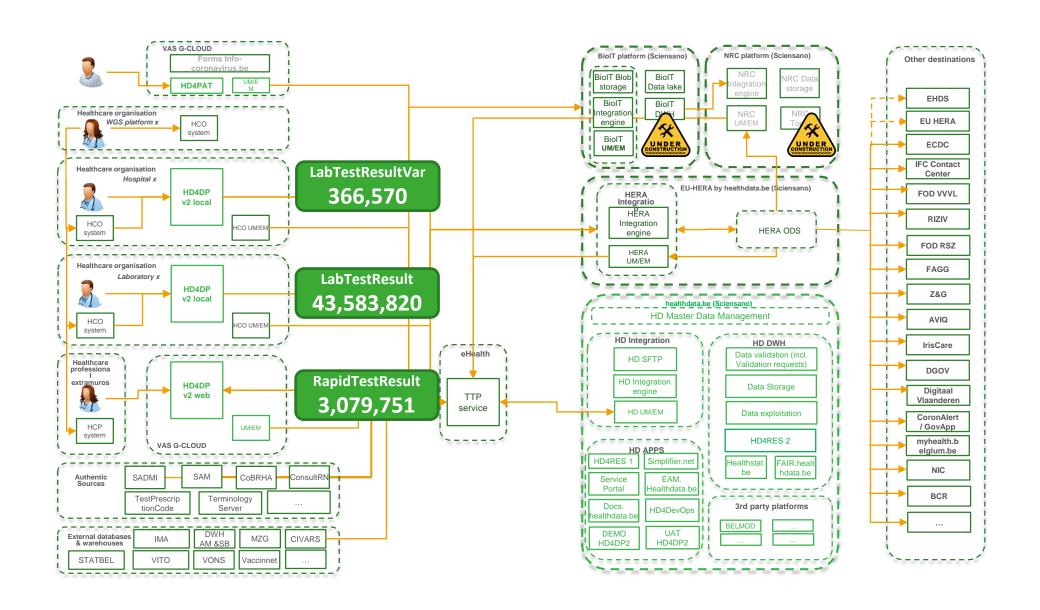

With contributions to new services impacting daily life

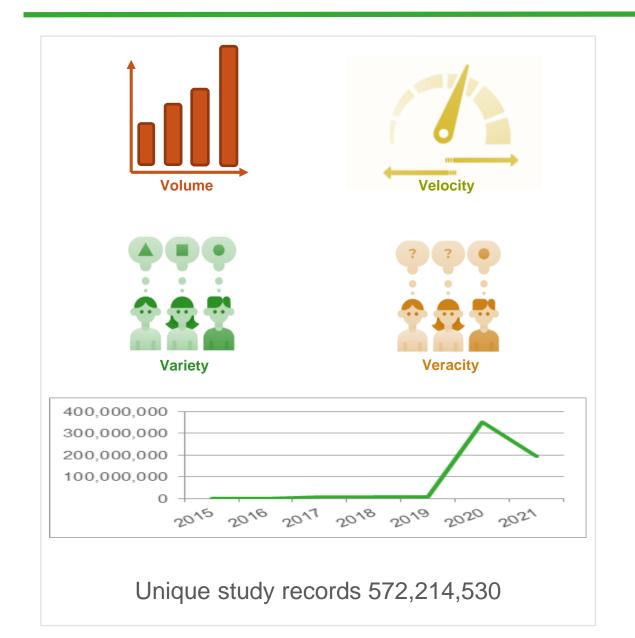

Many and diverse data providing organisations and individuals

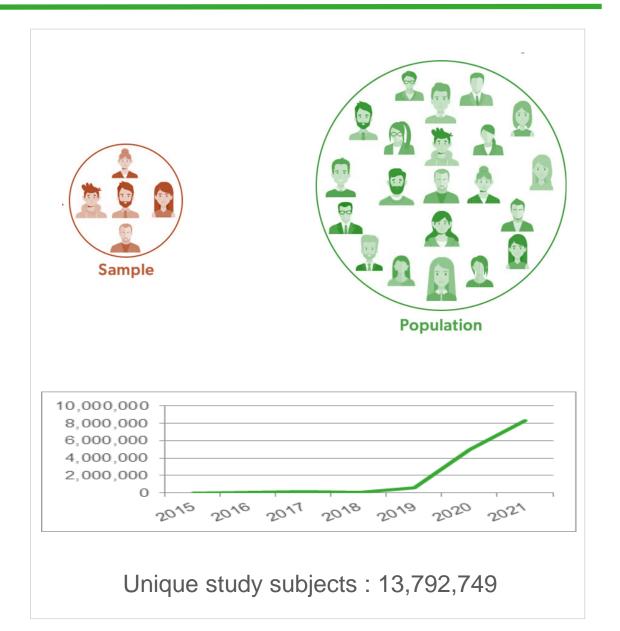

A continuous technical integration in Belgian ehealth landscape

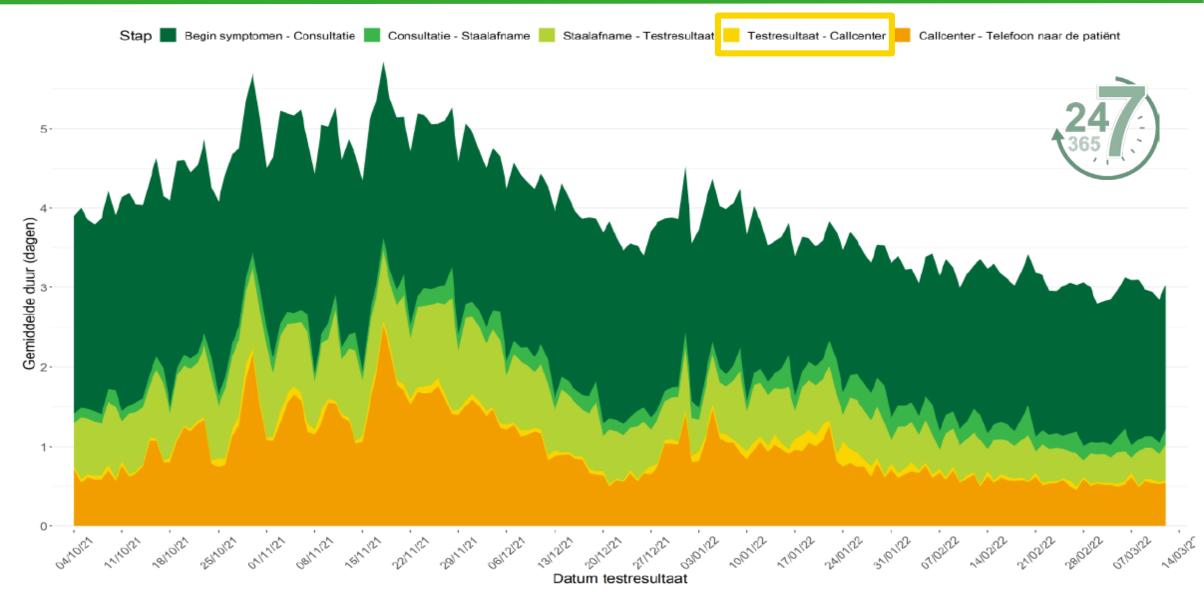

With a continuous stream of high volumes, diverse and changing data

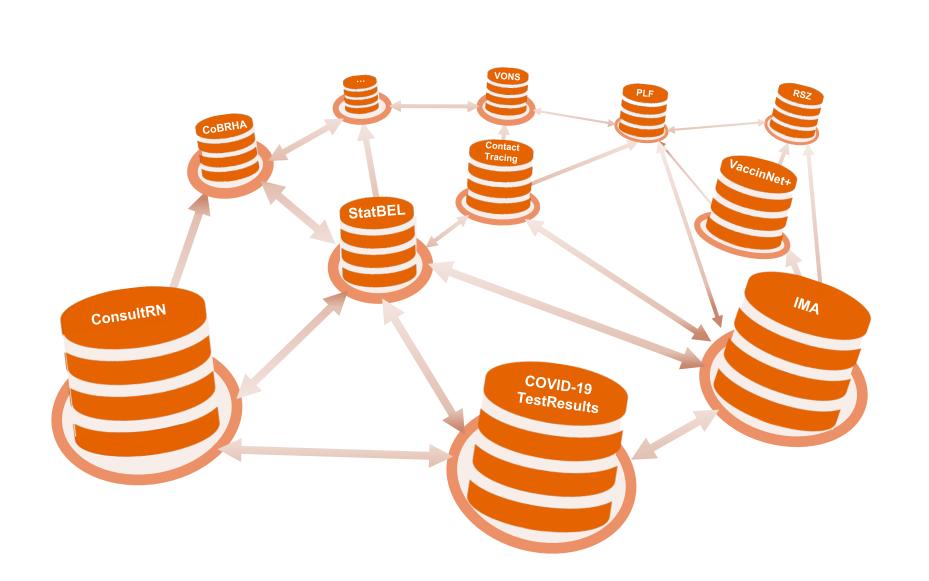

Performance indicator (proxy) laboratories and healthdata.be

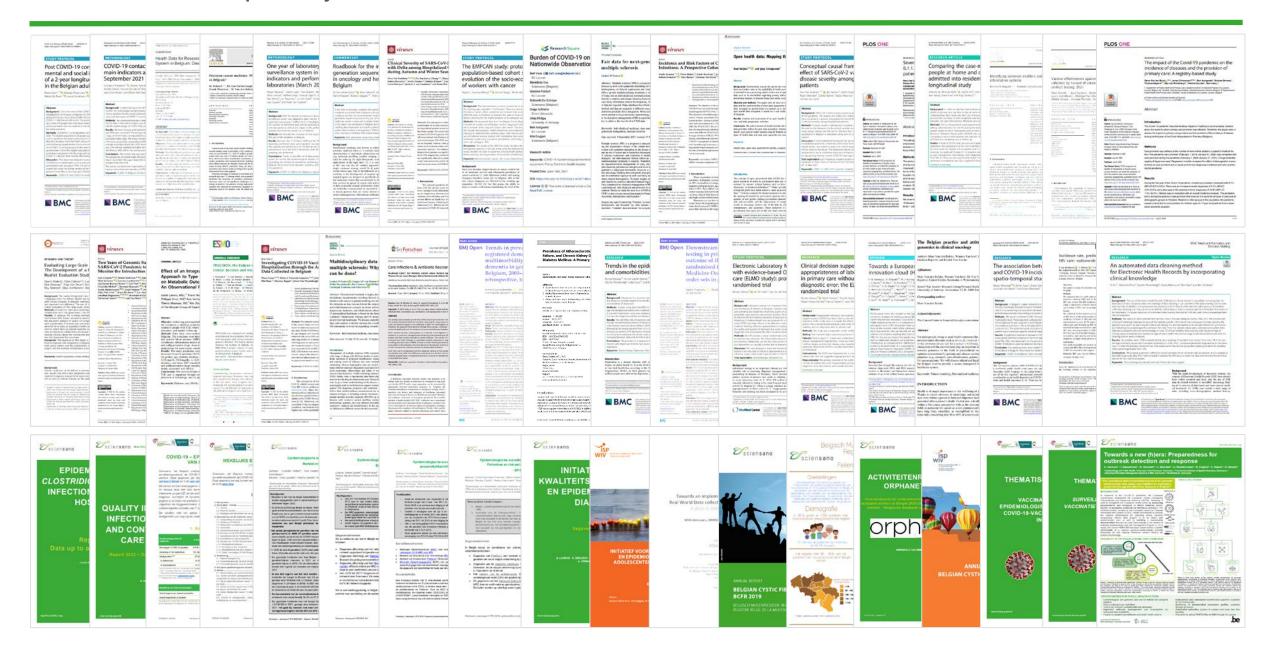

Proesmans K, Hancart S, Braeye T, Klamer S, Robesyn E, Djiena A, De Leeuw F, Mahieu R, Dreuw A, Hammami N, Wildemeersch D, Cornelissen L, Van Cauteren D. COVID-19 contact tracing in Belgium: main indicators and performance, January - September 2021. Arch Public Health. 2022 Apr 13;80(1):118. doi: 10.1186/s13690-022-00875-6. PMID: 35418097; PMCID: PMC9005619.

SARS-CoV-2 accelerated "linked data". But optimisation and maintenance is needed "to be prepared"

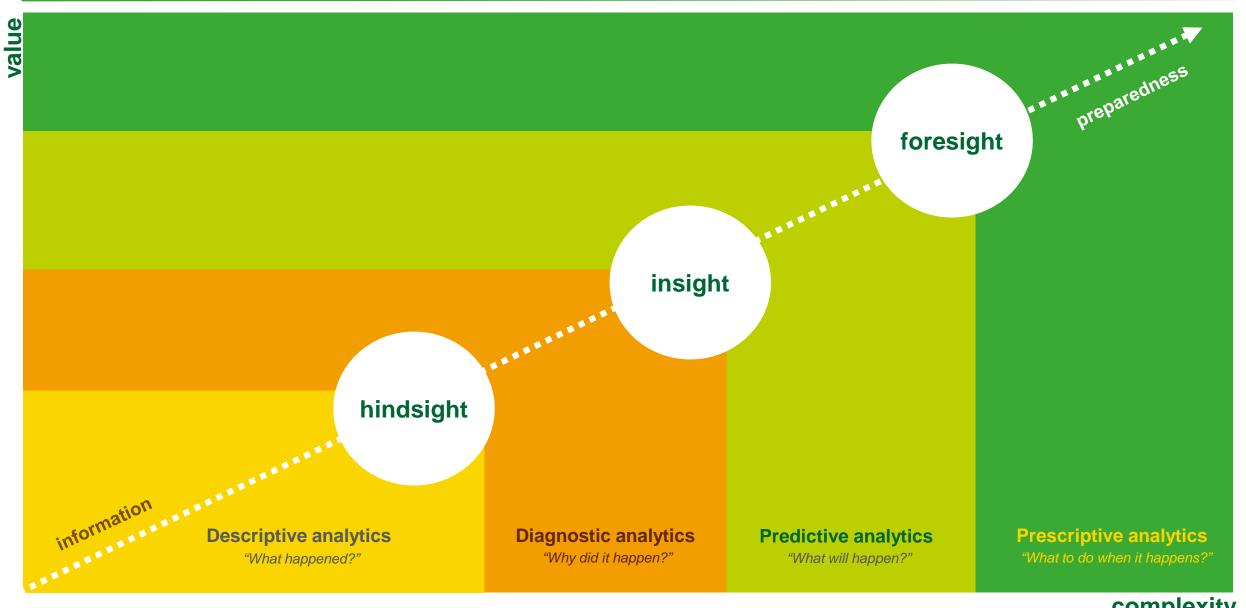

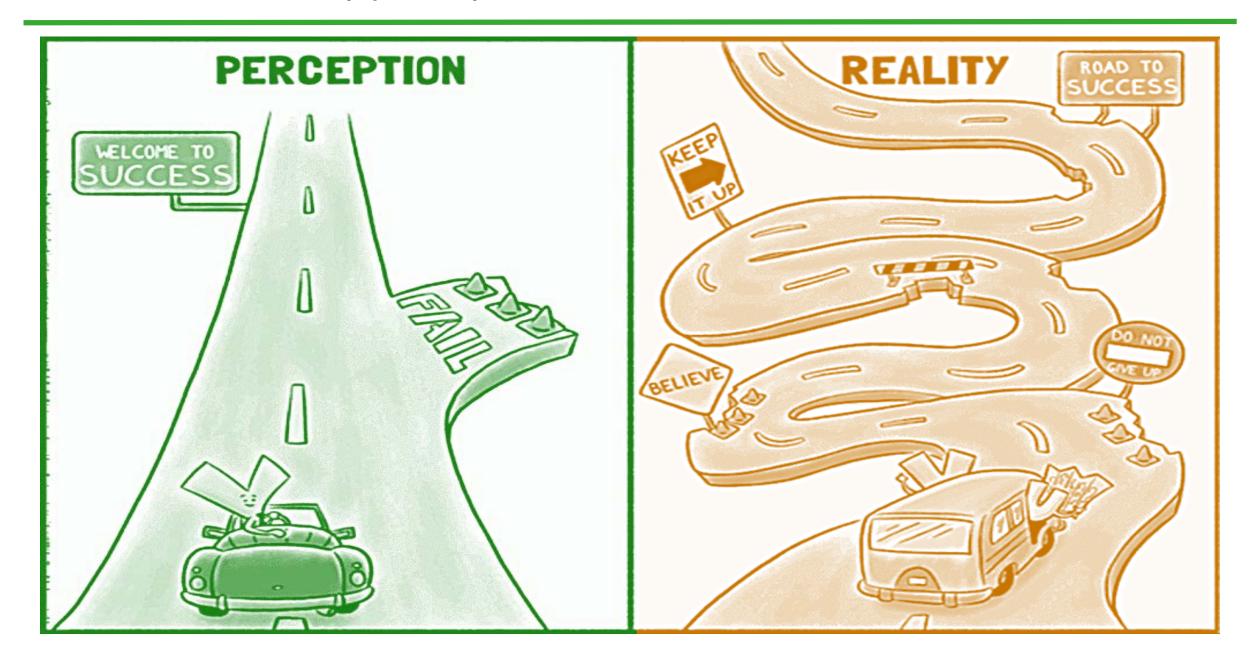

Scientific output by users based on data at healthdata.be

Preparedness: shift from descriptive towards "prescriptive" analytics

"IT's still not an easy journey"

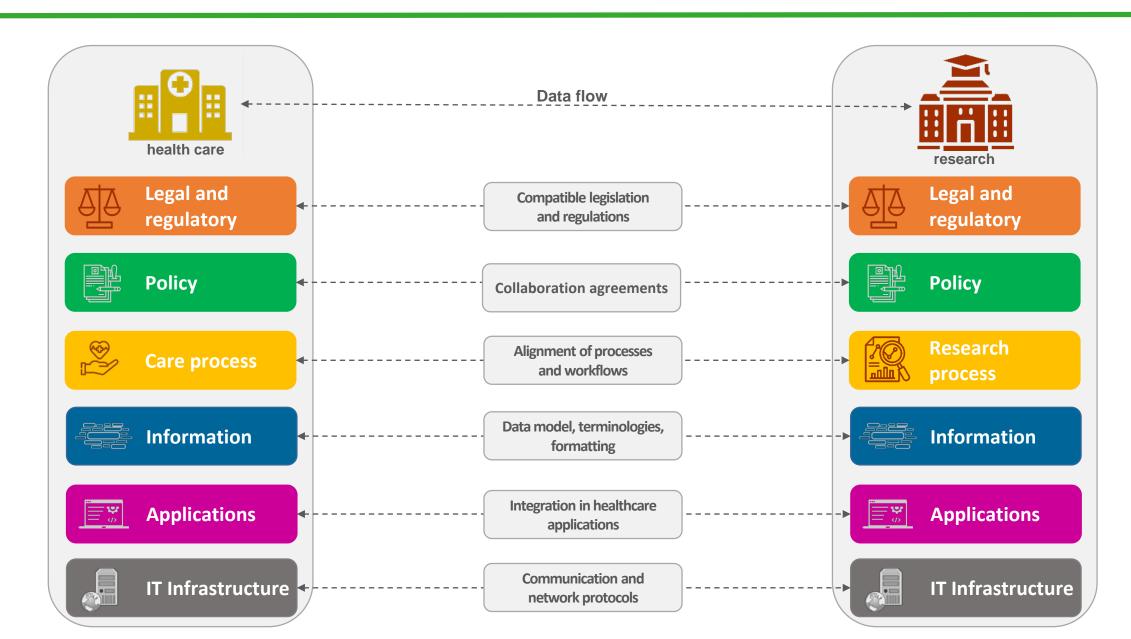

Real world data science in Belgian Public Health

we have come a long way, a lot has been done, but a lot more still needs to be done

2015 2023

"Interoperability" as key success factor for real-world data science

Road (opportunities & challenges) ahead ...

Prioritization of actions to bring current platform to "Plateau of productivity" (© Gartner)

2

Shift from IT-centric approach towards **User-centric** services

3

Optimization of research objects in terms of **Findable**, **Accessible**, **Interoperable** and **Reusable** both for machines and for people

Implement **SNOMED- CT** as main structured clinical vocabulary

Implement **HL7 FHIR** as standard for data formats and elements and as application programming interface for exchanging electronic health records

2023...

Facilitate the collection and processing of **genomics data**.

Align and connect with methods and applications from EU Health Emergency Preparedness and Response Authority (HERA).

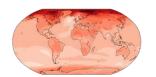

Adopt methods and applications from **Observational Health Data Sciences and Informatics** to increase re-use of data.

Make **synthetic data** and analytical pipeline available to increase re-use and decrease lead times.

Facilitate other emerging health research topics by harvesting data from other societal and environmental sources.
