Introduction

This survey was dedicated to the detection of ASF virus using molecular methods in swine serum and to the detection of antibodies specific to ASF virus in swine serum using ELISA.

The samples

The samples were prepared by the National Reference Laboratory, Enzootic, vector-borne and bee diseases, Infectious diseases in animals Directorate, Sciensano.

Virology

Homogeneity

3 different samples were used

PT2020ASFVIRPS1, PT2020ASFVIRPS2, PT2020ASFVIRNS3.

The homogeneity of the samples was tested by the NRL on 10 exemplars of each sample.

200204 D588 / RobotExtraction

200205 D591 D583 D589 R418/ManualExtraction

The samples were considered as homogeneous.

Target Values

The target value was determined by the NRL based on the homogeneity tests.

The samples PT2020ASFVIRPS1 and PT2020ASFVIRPS2 were considered as positive. The sample PT2020SFVITNS3 was considered as negative.

Stability

The stability was determined by comparison of the pre-survey results and the results obtained by the NRL during the survey. The samples were considered as stable.

The participants

6 laboratories participated to the ASF Virology survey:

Sciensano ; Arsia (Ciney) , DGZ (Torhout), LMVE (Luxemburg), Biosellal (France), ID-VET (Switzerland).

Randomisation and panel composition

Since a specific number has been assigned to each laboratory, the randomisation has been performed as follow:

Laboratory	impar	Par
Sample Order		
VASF 2001	PT2020ASFVIRPS1	PT2020ASFVIRPS2

VASF 2009	PT2020ASFVIRPS2	PT2020ASFVIRPS1
VASF 2010	PT2020ASFVIRNS3	PT2020ASFVIRNS3

The panel was constituted of 10 samples of 500 ul.

2. Serology

Homogeneity

6 different samples were used: PT2020ASFSERPS1, PT2020ASFSERPS2, PT2020ASFSERPS3, PT2020ASFSERNS4, PT2020ASFSERNS5, PT2020ASFSERNS6

The homogeneity of the samples was tested by the NRL on 10 exemplars of each sample using two different ELISA kits.

The samples were considered as homogeneous.

The participants

4 laboratories participated to the ASF Serology survey: Sciensano, Arsia (Ciney), DGZ (Torhout), LMVE (Luxemburg).

Target values

The target values were determined by the NRL using the homogeneity results.

The samples PT2020ASF SERPS1, PT2020ASF SERPS2 and PT2020ASF SERPS3 were considered as positive and the samples PT2020ASF SERNS4, PT2020ASF SERNS5, PT2020ASF SERNS6 were considered as negative;

Stability

The samples were tested before the survey and during the survey. The results were compared and the samples were considered as stable.

Randomisation and panel composition

Since a specific number has been assigned to each laboratory, the randomisation has been performed as follow:

Laboratory	Impar	Par

SASF 2010	PT2020ASF SERPS1	PT2020ASF SERNS4

The ASF serology panel consisted of 10 serum samples of 250 ul.

Survey Timeline

Transfer of the samples from NRL to QL: 12/03/2020

Randomization of the samples by QL:

sending samples to participants: 17/03/2020. The samples were sent on dry ice.

Deadline for the results encoding: 31/03/2020

Graphical representation

Besides the tables with the results a "Box and whisker" plot is added. It contains the following elements for the methods with at least 6 participants:

- a rectangle ranging from percentile 25 (P_{25}) to percentile 75 (P_{75})
- a central line representing the median of the results (P_{50})
- a lower limit showing the smallest value $x > P_{25} - 1.5 * (P_{75} - P_{25})$
- an upper limit representing the largest value $x < P_{75} + 1.5 * (P_{75} - P_{25})$
- all points outside this interval are represented by a dot.
